Machine Learning Methods in the Environmental Sciences: Neural Networks and Kernels

William W. Hsieh

Machine Learning Methods in the Environmental Sciences: Neural Networks and Kernels

William W. Hsieh

Machine Learning Methods in the Environmental Sciences: Neural Networks and Kernels William W. Hsieh

Machine learning methods originated from artificial intelligence and are now used in various fields in environmental sciences today. This is the first single-authored textbook providing a unified treatment of machine learning methods and their applications in the environmental sciences. Due to their powerful nonlinear modeling capability, machine learning methods today are used in satellite data processing, general circulation models(GCM), weather and climate prediction, air quality forecasting, analysis and modeling of environmental data, oceanographic and hydrological forecasting, ecological modeling, and monitoring of snow, ice and forests. The book includes end-of-chapter review questions and an appendix listing web sites for downloading computer code and data sources. A resources website containing datasets for exercises, and password-protected solutions are available. The book is suitable for first-year graduate students and advanced undergraduates. It is also valuable for researchers and practitioners in environmental sciences interested in applying these new methods to their own work.

Preface Excerpt

Machine learning is a major subfield in computational intelligence (also called artificial intelligence). Its main objective is to use computational methods to extract information from data. Neural network methods, generally regarded as forming the first wave of breakthrough in machine learning, became popular in the late 1980s, while kernel methods arrived in a second wave in the second half of the 1990s. This is the first single-authored textbook to give a unified treatment of machine learning methods and their applications in the environmental sciences.

Machine learning methods began to infiltrate the environmental sciences in the 1990s. Today, thanks to their powerful nonlinear modeling capability, they are no longer an exotic fringe species, as they are heavily used in satellite data processing, in general circulation models (GCM), in weather and climate prediction, air quality forecasting, analysis and modeling of environmental data, oceanographic and hydrological forecasting, ecological modeling, and in the monitoring of snow, ice and forests, etc.

This book presents machine learning methods and their applications in the environmental sciences (including satellite remote sensing, atmospheric science, climate science, oceanography, hydrology and ecology), written at a level suitable for beginning graduate students and advanced undergraduates. It is also valuable for researchers and practitioners in environmental sciences interested in applying these new methods to their own work.

Chapters 1-3, intended mainly as background material for students, cover the standard statistical methods used in environmental sciences. The machine learning methods of chapters 4-12 provide powerful nonlinear generalizations for many of these standard linear statistical methods. End-of-chapter review questions are included, allowing readers to develop their problem-solving skills and monitor their understanding of the material presented. An appendix lists websites available for downloading computer code and data sources. A resources website is available containing datasets for exercises, and additional material to keep the book completely up-to-date.

About the Author

WILLIAM W. HSIEH is a Professor in the Department of Earth and Ocean Sciences and in the Department of Physics and Astronomy, as well as Chair of the Atmospheric Science Programme, at the University of British Columbia. He is internationally known for his pioneering work in developing and applying machine learning methods in environmental sciences. He has published over 80 peer-reviewed journal publications covering areas of climate variability, machine learning, oceanography, atmospheric science and hydrology.

From reader reviews:

Sun Byrd:

Book is definitely written, printed, or illustrated for everything. You can learn everything you want by a e-book. Book has a different type. To be sure that book is important issue to bring us around the world. Next to that you can your reading proficiency was fluently. A book Machine Learning Methods in the Environmental Sciences: Neural Networks and Kernels will make you to be smarter. You can feel far more confidence if you can know about everything. But some of you think that open or reading some sort of book make you bored. It isn't make you fun. Why they might be thought like that? Have you seeking best book or acceptable book with you?

Larry Boggs:

As people who live in often the modest era should be revise about what going on or facts even knowledge to make these people keep up with the era that is certainly always change and advance. Some of you maybe will probably update themselves by studying books. It is a good choice for you but the problems coming to a person is you don't know what kind you should start with. This Machine Learning Methods in the Environmental Sciences: Neural Networks and Kernels is our recommendation to help you keep up with the world. Why, because book serves what you want and wish in this era.

Phil Garcia:

The publication untitled Machine Learning Methods in the Environmental Sciences: Neural Networks and Kernels is the publication that recommended to you to read. You can see the quality of the book content that will be shown to you actually. The language that creator use to explained their ideas are easily to understand. The copy writer was did a lot of investigation when write the book, so the information that they share to you personally is absolutely accurate. You also might get the e-book of Machine Learning Methods in the Environmental Sciences: Neural Networks and Kernels from the publisher to make you considerably more enjoy free time.

Quentin Taylor:

The book untitled Machine Learning Methods in the Environmental Sciences: Neural Networks and Kernels contain a lot of information on this. The writer explains your ex idea with easy way. The language is very clear to see all the people, so do not necessarily worry, you can easy to read the item. The book was written by famous author. The author brings you in the new age of literary works. It is easy to read this book because you can read on your smart phone, or device, so you can read the book inside anywhere and anytime. If you want to buy the e-book, you can available their official web-site in addition to order it. Have a nice study.
