This book contains proven steps and strategies on how to prevent, treat and fight cancer.

Cancer has long been closely associated with death, low quality of life, and financial difficulties. With all the complications it causes, lives it takes, and people it subjects to suffering, cancer is definitely a difficult disease.

Lung cancer is one of the leading causes of cancer deaths worldwide. Different risk factors have been attributed to its development- with genetics and environmental influences playing a major role. The diversity of its causes makes its treatment all the more difficult, which makes identification of causes essential to its management. The recognition of symptoms and diagnosis early in the course of the disease most frequently leads to good prognostication. Lung cancer is considered as a lifestyle-related disease; hence, eradication of risk factors, early screening and prompt initiation of treatment may greatly reduce its incidence.
