Drug-like Properties: Concepts, Structure Design and Methods (from ADME to Security Optimization) (Chinese Edition) (mei) ai de hua · H. ke en si, di li

A successful drug is a combination of biological activity and drug-like property. This book explains the process of discovering drugs, as well as how property-based designs can improve the success rate to make chemical compounds become listed drugs. Writing from the perspective of drug discovery scientists, the author provides a practical guide for pharmaceutical chemists, ADME scientists (engaging on drug absorption, distribution, metabolism and excretion) and students of higher grades in this area. Drug-like properties such as solubility, permeability and metabolism are basic decisive elements to investigate drugs activity in human body. With the least mathematical formulas for the discussion of pharmacokinetic concepts, the author focuses on their actual application in drug discovery projects.
