Biomimicry in Architecture Michael Pawlyn

In the search for genuinely sustainable building design and technology - designs that go beyond conventional sustainability to be truly restorative - we often find that nature got there first. Over 3.5 billion years of natural history have evolved innumerable examples of forms, systems, and processes that we can now apply beneficially to modern green design.

Aimed at architects, urban designers and product designers, *Biomimicry in Architecture* looks to the natural world to seek clues as to how we can achieve radical increases in resource efficiency. Packed with inspiring case studies predicting future trends, the principal chapters look in turn at: structural efficiency; material manufacture; zero-waste systems; water; energy generation; the thermal environment; and biomimetic products.

Together, it is an amazing sourcebook of extraordinary design solutions to equip us for the challenges of building a sustainable and restorative future.

From reader reviews:

Vicky Bowman:

Reading a guide tends to be new life style in this era globalization. With studying you can get a lot of information that can give you benefit in your life. Together with book everyone in this world can certainly share their idea. Textbooks can also inspire a lot of people. Plenty of author can inspire their very own reader with their story or even their experience. Not only the storyplot that share in the publications. But also they write about the ability about something that you need illustration. How to get the good score toefl, or how to teach children, there are many kinds of book that exist now. The authors these days always try to improve their expertise in writing, they also doing some research before they write for their book. One of them is this Biomimicry in Architecture.

Homer Smith:
