Throughout human history, the morbidity and mortality associated with human disease has driven medical science into an ever-expanding quest for treatment and cure. Over the past century, a therapeutic approach complementing chemical drugs has been developing which uses proteins and peptides in the treatment of disease. Many innovative protein therapeutic platforms are currently being employed and continue to be developed to attain cures in areas of unmet medical need; these include direct copies of natural protein structure and function as well as proteins with completely novel functionality. Today, protein therapeutics represents the fastest growing sector in the pharmaceutical industry and comprises 16% of prescription drug sales in 2011.
